

SECURE PRIDE

Where we draw the line online.

Brand Voice Guide & Website Copy

v1.0 · March 2026 · Internal & Agency Reference

Cybersecurity for LGBTQ+ organizations.

Part 1: Brand Voice

This guide defines how Secure Pride speaks across every surface: website, dashboard UI, social media, email, documentation, and partner communications. Every word should feel like it comes from someone who understands what our users are protecting and why it matters.

Who We're Talking To

Our primary audience is community organization leaders: executive directors, program managers, board members, and IT volunteers at LGBTQ+ nonprofits, community centers, advocacy groups, health clinics, and mutual aid networks.

They are not security professionals. They are people who chose mission-driven work and are now responsible for protecting donor data, member information, and organizational communications in an increasingly hostile digital landscape.

They have 15 minutes between meetings. They are context-switching between grant applications, event planning, and board communications. They do not have time for a cybersecurity education. They need tools that respect their intelligence without demanding their expertise.

Voice Principles

1. Calm Confidence

We speak from a place of competence, not alarm. Security marketing has a long history of manufacturing fear to drive purchases. We reject that. Our users face real threats; they do not need us amplifying anxiety. We are the steady hand, not the siren.

✗ DON'T

Your data is at risk. Act now before it's too late.

✓ DO

Your org's data deserves protection built for real threats.

✗ DON'T

47 CRITICAL ALERTS DETECTED

✓ DO

3 items need your attention this week.

✗ DON'T

Hackers are targeting organizations like yours.

✓ DO

We protect the orgs that protect our communities.

2. Culturally Competent

We speak as members of the community, not as outsiders offering charity. We understand that for LGBTQ+ organizations, a data breach is not just a compliance event — it can expose vulnerable people to real-world harm. Our language reflects that understanding without centering trauma.

We never explain why LGBTQ+ organizations need security. Our users already know. We never tokenize, perform allyship, or use rainbow aesthetics as decoration. Our visual identity is proudly queer because our team and mission are proudly queer.

X DON'T

We help marginalized communities stay safe online.

✓ DO

We build security tools for organizations like ours.

X DON'T

Protecting vulnerable populations from cyber threats.

✓ DO

Protecting the people who protect our communities.

3. Approachable Professional

We are experts who don't need jargon to prove it. We translate complexity into clarity without condescension. If a concept requires a technical term, we use it once, define it in plain language, and move on.

Our tone sits between casual and institutional. Think of a trusted colleague who happens to be really good at security — not a vendor with a slide deck, and not a friend who happens to have a firewall.

X DON'T

Our ML-driven DLP engine performs heuristic analysis...

✓ DO

Our scanner checks AI conversations for hidden attacks.

X DON'T

Hey!! We're SO excited about protecting your stuff!!!

✓ DO

We're building something we wish existed when we needed it.

4. Protection-First Framing

Every message leads with what we protect, not what we prevent. The distinction matters: prevention language centers the threat; protection language centers the people. Our users open the dashboard to confirm they're safe, not to discover what's wrong.

X DON'T

We prevent data breaches and stop hackers.

✓ DO

Your organization is protected. Here's what we caught.

X DON'T

Zero threats detected.

✓ DO

All clear. Your defenses are working.

5. Honest About Limitations

We never claim to be the only security tool an organization needs. We never promise absolute protection. We are specific about what we do, transparent about what we don't, and generous in pointing to complementary resources. Trust is built on honesty, not sales copy.

X DON'T

Total protection for your entire organization.

✓ DO

We protect your AI workflows. Pair with endpoint tools.

Voice Mechanics

Sentence Structure

Lead with the benefit or status, not the mechanism. Short declarative sentences for primary messages. Longer sentences only when context requires nuance. Default to active voice. Use second person (you, your) for direct communication and first person plural (we, our) for brand statements.

Vocabulary

Use "protect" over "secure" (warmer). Use "community" over "users" (human). Use "attention" over "alert" (calmer). Use "blocked" over "prevented" (concrete). Use "scanner" over "engine" (accessible). Avoid "vulnerability," "exploit," "attack surface," and "threat landscape" in user-facing copy.

Punctuation & Formatting

One exclamation mark per page maximum, and only in celebratory contexts. No ALL CAPS for emphasis (our neon aesthetic handles visual emphasis). Em dashes for asides. Oxford comma always. Sentence case for headings, not title case. Numbers under ten spelled out, except in data displays.

Inclusive Language

Gender-neutral by default. No assumptions about family structure, relationship status, or identity. When referring to the LGBTQ+ community, use "LGBTQ+" (not LGBT, LGBTQIA+, or queer as a standalone). Respect that "queer" is reclaimed by many but not all. Never out individuals or organizations without explicit consent.

Part 2: Website Copy

Production-ready copy for the Secure Pride landing page. Organized by section. All copy is final unless noted.

CTA — PRIMARY

Get protected

CTA — SECONDARY

See how it works

Hero Section

HEADLINE

Cybersecurity for the organizations that protect our communities.

73 characters. Single sentence. Centers mission, not product.

SUBHEADLINE

Secure Pride scans your AI workflows for hidden threats and sensitive data leaks — so you can focus on the work that matters.

120 characters. Explains what we do in one breath.

SUPPORTING LINE (BELOW CTA)

Free for organizations with fewer than 10 staff. No credit card required.

Removes friction. Signals nonprofit-first pricing.

Trust Bar

TRUST STATEMENT

Built by LGBTQ+ technologists. Open source. Self-hostable. Your data never leaves your infrastructure.

Four trust vectors: identity, transparency, autonomy, privacy.

Problem Section

SECTION HEADLINE

Your community's data deserves more than an afterthought.

BODY COPY

Most cybersecurity tools are built for enterprises with six-figure budgets and dedicated IT teams. Community organizations get the leftovers: complex dashboards designed for analysts, pricing that assumes a Fortune 500 headcount, and language that treats security as a gatekeeping exercise.

Meanwhile, the organizations doing the most sensitive work — protecting member identities, safeguarding health information, coordinating advocacy in hostile environments — are left to figure it out alone.

We built Secure Pride because we needed it ourselves.

Three paragraphs. Validates frustration without fear. Ends with origin hook.

Product Section

SECTION HEADLINE

Protection that understands what you're protecting.

SECTION SUBHEAD

Secure Pride monitors your AI-powered tools for prompt injection attacks, sensitive data exposure, and credential leaks — in real time, with plain-language reporting.

Feature Cards

FEATURE 1 — SCAN & DETECT

Every AI conversation is scanned for eight types of prompt injection attacks and eight categories of sensitive data — from email addresses to API keys. Threats are caught before they reach your AI provider.

Specific numbers build credibility without jargon.

FEATURE 2 — ANALYZE & PROTECT

Sensitive information is automatically masked in real time. Names, phone numbers, credentials, and health data are redacted before they leave your network. Original data is never stored.

Emphasizes privacy-by-default architecture.

FEATURE 3 — REPORT & EMPOWER

Your dashboard shows protection status at a glance — not a wall of alerts. See what was caught, what was blocked, and what needs your attention, in language that respects your time.

References the culturally competent dashboard philosophy.

How It Works

SECTION HEADLINE

Up and running in under five minutes.

STEP 1

Deploy the scanner. One Docker command. Self-hosted on your infrastructure. Your data never touches our servers.

STEP 2

Connect your AI tools. Point your LLM traffic through Secure Pride. Works with any provider: OpenAI, Anthropic, Google, local models.

STEP 3

See your protection status. Open the dashboard. Your organization's security posture is visible immediately. No configuration, no training, no certification required.

Pricing Section

SECTION HEADLINE

Security shouldn't require a fundraising campaign.

COMMUNITY TIER — FREE

For organizations with fewer than 10 staff. Full scanner. Full dashboard. No feature gates. No credit card.

This isn't a trial. This is the product.

The second line signals that free is real, not bait.

ORGANIZATION TIER — \$200/MONTH

For teams of 10–50. Everything in Community, plus priority support, custom policy templates, and audit log exports.

Less than the cost of one incident response consultation.

Price anchored against real-world alternative.

COALITION TIER — CUSTOM

For networks of organizations, umbrella groups, and fiscal sponsors managing security across multiple teams.

Talk to us. We'll build something that works.

Invitational, not salesy.

About Section

SECTION HEADLINE

Built by the community, for the community.

BODY COPY

Secure Pride is an open-source cybersecurity project built by LGBTQ+ technologists who got tired of watching our organizations struggle with tools designed for someone else.

We believe security infrastructure should be as thoughtfully designed as the communities it protects. That means tools that speak plainly, respect your time, look like they belong to you, and never treat your data as a product.

Our scanner is Apache 2.0 licensed. Our code is auditable. Our roadmap is public. If you want to contribute, the door is open.

Three paragraphs. Origin, philosophy, transparency.

Final CTA Section

HEADLINE

Your community is doing important work. Let's make sure it stays protected.

CTA BUTTON

Get protected

SUPPORTING LINE

Free for organizations with fewer than 10 staff. Open source. Self-hostable.

Meta & Social

PAGE TITLE (SEO)

Secure Pride — Cybersecurity for LGBTQ+ Organizations

META DESCRIPTION

Open-source AI security scanner built for community organizations. Detect prompt injections, mask sensitive data, and monitor protection status — in plain language.

155 characters. Hits SEO terms without keyword stuffing.

OPEN GRAPH TITLE

Where we draw the line online.

OPEN GRAPH DESCRIPTION

Cybersecurity tools built by LGBTQ+ technologists for the organizations that protect our communities.

Email & Onboarding

WELCOME EMAIL SUBJECT

You're protected.

**WELCOME EMAIL BODY**

Welcome to Secure Pride.

Your scanner is active. Your dashboard is live. Here's what to know:

Your AI conversations are now monitored for prompt injection attacks and sensitive data exposure. Threats are blocked automatically. You'll see a summary on your dashboard.

If you need help, reply to this email. A human will respond.

We're glad you're here.

— The Secure Pride team

Error & Empty States

DASHBOARD — NO DATA YET

No scans recorded yet. Once your AI tools connect, you'll see your protection status here.

DASHBOARD — ALL CLEAR

All clear. Your defenses are working and no items need your attention.

DASHBOARD — ERROR STATE

Something went wrong loading your data. This is on our end, not yours. We're looking into it.

404 PAGE

This page doesn't exist. The page you're looking for has moved or never existed. Here's the way back home.

Dashboard UI Copy

PROTECTION — ACTIVE

Your organization is protected.

PROTECTION — DEGRADED

Your scanner is running, but some checks need attention.

PROTECTION — OFFLINE

Your scanner is offline. Reconnect to resume protection.

THREAT BLOCKED

Blocked: [threat type] detected and stopped before reaching your AI provider.

PII MASKED

Masked: [data type] was redacted from the outgoing request. Original data was not stored.

Part 4: Preferred Terminology

Quick reference for consistent language across all surfaces.

USE THIS	NOT THIS	WHY
Protect	Secure / defend / harden	Warmer, centers people not perimeter
Community	Users / customers / clients	Human, relational, accurate
Attention	Alert / warning / critical	Calmer, invites action without panic
Blocked	Prevented / mitigated	Concrete, plain language
Scanner	Engine / pipeline / module	Accessible, non-technical
Sensitive data	PII / PHI / regulated data	Plain language first
LGBTQ+	LGBT / LGBTQIA+ / queer	Broadly inclusive, widely recognized
Organization	Entity / tenant / account	Human-scale, not SaaS jargon
Dashboard	Console / portal / control plane	Familiar, non-intimidating
Your / you	The user's / the org's	Direct address, personal
We / our	Secure Pride / the platform	First person, not corporate third
